

NEPAL 20th April – 22nd May 2007

Birdreport by Jens Ole Byskov. The tour was arranged entirely by myself. It was a trip, common birdwatchers with a normal moneybudget can make. I had no help from any local guides. I did not use tapes or dvd records to call out the birds. No cars or landrovers or elephants were used to difficult places. I found 367 different species visiting Phulchowki Mountain, Chitwan National Park, Langtang-Helambu trek and Kathmandu City. The weather was bad quite many days with lots of rain especially in the last part of the trip.
